EXECUTIVE SUMMARY

Plant Operations, Maintenance & Engineering Leader with 20+ years of professional experience, including approximately 18 years in the cement industry and 3 years with the Royal Saudi Air Defense Forces. Extensive experience across cement manufacturing, power generation, utilities, asset reliability, maintenance management, energy optimization, and strategic projects. Repeatedly appointed as Acting Plant General Director, with responsibility for production, maintenance, quality, logistics, utilities, HSE, cost control, and overall plant performance.

Currently serving as Maintenance Manager & Logistics Support for a three-line cement plant with 15,000 TPD capacity and a 120 MW captive power plant, while managing major energy and infrastructure projects totaling approximately SAR 180M.

Also serving as SPCC Company Ambassador for the Future Cement Initiative (FCI) and Team Leader for the Industrial Competitiveness Program (MIM), representing the company in sustainability, energy efficiency, industrial competitiveness, and strategic industry initiatives.

Proven track record of achieving 20% lower unplanned downtime, 12% lower maintenance expenditure, and significant annual energy savings. CMRP certified, with strong interest in financial analysis, CAPEX evaluation, budgeting, cost optimization, and business performance.

PROFESSIONAL EXPERIENCE

Southern Province Cement Company (SPCC)

Plant General Director (Acting) – Tahama Plant | Multiple Assignments

Acting Assignments: February 2026 | March 2026 | July 2026

Scope of Responsibility:

- Repeatedly appointed as Acting Plant General Director, assuming full responsibility for overall plant operations, performance, and business continuity during the assigned periods.
- Led cross-functional departments including Production, Maintenance, Quality, Logistics, Utilities, Safety, and Administration, ensuring safe, reliable, and efficient plant operations.
- Oversaw three clinker production lines with a total capacity of 15,000 TPD, in addition to a 120 MW captive power plant and associated utilities.
- Directed daily plant operations, production priorities, maintenance activities, shutdown coordination, and critical operational decisions to ensure production continuity and plant stability.
- Monitored key operational and financial performance indicators, focusing on production, plant reliability, energy efficiency, cost optimization, quality, and safety performance.
- Led cross-functional teams in resolving critical operational issues, improving coordination between departments, and ensuring timely management decisions.
- Coordinated with executive management and key stakeholders on plant performance, operational challenges, strategic initiatives, major projects, and improvement plans.

Maintenance Manager & Logistics Support – Tahama Plant

Acting: November 2023 – September 2025 | Official Appointment: September 2025 – Present

Scope of Responsibility:

- Lead the plant-wide maintenance and logistics strategy for three cement production lines with a total capacity of 15,000 TPD, covering kilns, raw mills, preheaters, clinker coolers, cement mills, utilities, and auxiliary systems.
- Lead maintenance and logistics activities across Mechanical, Electrical, Maintenance planning, Utilities, 120 MW Power Plant, Water Treatment, Fuel Management, and Logistics, ensuring achievement of key KPIs including equipment availability, MTBF (Mean Time Between Failures), MTTR (Mean Time To Repair), preventive maintenance compliance, cost control, and operational uptime.
- Drive asset reliability, preventive and predictive maintenance, shutdown planning, RCFA, and performance optimization across major plant equipment.
- Manage maintenance budgets, contractor costs, service expenditures, spare-parts strategy, and inventory optimization while maintaining equipment reliability and operational performance.
- Ensure compliance with HSE, environmental, regulatory, and plant operational requirements across maintenance and logistics activities.

Key Achievements:

- Reduced unplanned downtime by 20% through reliability improvement, shutdown planning, root-cause analysis, and disciplined maintenance practices.
- Reduced spare-parts inventory from SAR 95M to SAR 84M (11.6%) through inventory optimization, obsolete-stock elimination, and spare-parts rationalization without compromising equipment availability.
- Improved workforce productivity by approximately 25%.
- Achieved SAR 3M in annual energy savings through energy-efficiency and operational improvement initiatives.
- Reduced maintenance expenditure by 12% while maintaining plant reliability and production continuity.
- Reduced electrical power consumption from 119 kWh/ton of cement to 111.3 kWh/ton of cement.

Project Manager | Energy Optimization & Strategic Projects

November 2023 – Present

- Lead major strategic energy and infrastructure projects supporting SPCC's operational efficiency, energy transition, and long-term business objectives.
- Manage the full project lifecycle, including CAPEX studies, feasibility assessments, engineering packages, risk assessments, tendering support, project execution, and performance monitoring.
- Manage and coordinate EPC contractors, engineering consultants, internal stakeholders, and external authorities to ensure projects meet technical requirements, budgets, schedules, and business objectives.
- Lead major electrical grid connection and natural gas conversion projects, supporting SPCC's transition toward more efficient and sustainable energy sources.
- Monitor project cost, schedule, technical performance, risks, and contractor progress, ensuring timely resolution of critical issues and effective management reporting.
- Achieved a 30% reduction in rework and secured more than SAR 10M in cost savings through improved project coordination, engineering review, and execution control.

Key Projects:

- Electrical Grid Connection Projects – SAR 45M
- Natural Gas Conversion Projects – SAR 100M
- Power Plant Engine Overhauls – SAR 31M
- Cooling Tower Upgrade – SAR 4M

Section Head – Power Plant

March, 2019 – September, 2025

- Led the operation and maintenance of a 120 MW captive diesel power plant, ensuring reliable and continuous power supply to support cement plant production and critical operations.
- Managed the operation and maintenance of the Desalination Plant, Water Treatment Systems, Fuel Station, and associated utilities, ensuring reliable supply of power, water, and fuel to support continuous plant operations.
- Led preventive, predictive, and corrective maintenance activities for generators, electrical systems, control systems, and major power plant equipment.
- Monitored power generation performance, fuel consumption, energy efficiency, equipment availability, and operational KPIs, implementing improvement actions to optimize performance and control operating costs.
- Analyzed energy consumption and developed energy-saving and operational improvement initiatives to enhance power plant efficiency and budget performance.
- Led troubleshooting and root-cause analysis (RCFA) for critical equipment failures to minimize downtime and improve reliability.
- Coordinated major overhauls, shutdown activities, spare-parts planning, contractors, and technical service providers to ensure safe and timely execution.
- Supervised and developed the power plant team, ensuring effective manpower utilization, technical competency, and adherence to HSE requirements.

Royal Saudi Air Defense Forces – Electrical Supervisor

March, 2016 – March, 2019

- Supervised the operation, maintenance, and troubleshooting of electrical power, control, and automation systems, ensuring high reliability and operational readiness.
- Maintained and troubleshot 400 Hz frequency converters, ensuring reliable operation and proper synchronization with generators.
- Performed preventive and corrective maintenance, fault diagnosis, and system upgrades using electrical drawings, schematics, technical manuals, and test equipment.
- Ensured strict compliance with electrical safety standards and military operational procedures, reducing risk and improving workplace safety.

Key Achievements:

Restored and repaired decommissioned electrical equipment and systems, extending asset life and reducing the need for equipment replacement.

Southern Province Cement Company (SPCC) – Electrical Foreman

2005 – 2016

- Supervised electrical maintenance and troubleshooting activities across cement plant equipment and electrical systems to ensure reliable and continuous plant operations.

- Maintained and troubleshot 13.8 kV substations, medium-voltage (MV) switchgear up to 4,000 A, PLC systems, and plant power distribution systems.
- Performed fault diagnosis and troubleshooting using electrical drawings, schematics, protection systems, and test equipment.
- Coordinated daily electrical maintenance activities, manpower allocation, and work priorities to support equipment availability and production continuity.

ADDITIONAL LEADERSHIP & INDUSTRY ROLES

Company Ambassador – Future Cement Initiative (FCI)

2026 – Present

- Appointed as SPCC Company Ambassador for the Future Cement Initiative (FCI), representing the company in industry collaboration and knowledge-sharing activities.
- Coordinate SPCC participation in initiatives related to cement industry development, energy efficiency, sustainability, decarbonization, digital transformation, and operational excellence.
- Represent SPCC in industry meetings, workshops, conferences, and technical discussions related to the future development and competitiveness of the cement sector.

Team Leader – Industrial Competitiveness Program (MIM)

May 2025 – Present

- Appointed as SPCC Team Leader for the Industrial Competitiveness Program, leading cross-functional coordination across the company.
- Lead initiatives to improve energy efficiency, operational performance, gap analysis, and industrial competitiveness in alignment with national program requirements.
- Represent SPCC in government reviews, technical meetings, and workshops, coordinating with internal stakeholders and external authorities.
- Drive the implementation and follow-up of energy-efficiency initiatives, performance improvement actions, and national industrial benchmarks.

EDUCATION

Bachelor of Engineering Technology – Electrical Engineering
College of Technology, Jeddah, Saudi Arabia
GPA: 4.55 / 5.00 – Excellent with Honors

PROFESSIONAL CERTIFICATIONS

- CMRP – Certified Maintenance & Reliability Professional

PROFESSIONAL TRAINING

- CEM – Energy Manager
- CMVP – Measurement & Verification Professional
- PMP – Project Management Professional
- SAP PM & Maximo – Advanced CMMS
- Siemens – Digital Twin & AI in Maintenance
- Schneider Electric – Industry 4.0 & Predictive Analytics
- FMAA – Financial Modeling & Analysis Analyst
- Finance for Non-Financial Managers
- Key Performance Indicators (KPI)

TECHNICAL & OPERATIONAL SKILLS

- Cement Plant Operations & Maintenance
- Asset Management & Equipment Reliability
- Preventive, Predictive & Corrective Maintenance
- Maintenance Planning & Shutdown Management
- Root Cause Failure Analysis (RCFA)
- CMMS, SAP PM & Maximo
- Power Generation & Utilities Management
- Electrical Systems, MV/HV & Power Distribution
- Energy Efficiency & Energy Optimization
- CAPEX Projects & EPC Management
- Strategic Energy & Infrastructure Projects
- Operational Performance & KPI Management
- Cost Optimization & Maintenance Budget Control
- Spare Parts & Inventory Optimization
- HSE & Regulatory Compliance

LEADERSHIP & MANAGEMENT SKILLS

- Plant Operations Leadership
- Strategic Leadership & Decision-Making
- Operational Excellence & Continuous Improvement
- Cross-Functional Team Leadership
- Production & Maintenance Coordination
- Team Development & Performance Management
- Cost Control & Budget Management
- Project & Program Leadership
- Contractor & Stakeholder Management
- Government & External Stakeholder Relations
- Risk Management & Problem-Solving
- Business Continuity & Operational Reliability
